MRS. A. C. (MILVILLE, N. J.)

carries three industrial policies on her children. The Prudential, in accordance with its rule regarding persistent policyholders, recently declared a dividend of \$3.40 on each policy, although the policies did not provide for dividends. These dividends were offered in cash, but the mother preferred to pay for thirty-four weeks' insurance in advance, and had the money placed to the credit of each policy. The Prudential is paying cash dividends to its policy-holders all the time.

ROACH TRAP.

Entrance Chute the Trap. If mice can be caught and destroyed in a trap there is no reason why roaches cannot be exterminated in the same way. This is the conclusion of a New York inventor, who has patented the roach trap illustrated here. It is made of pasteboard, in two sections, one section being cut away to form an over-

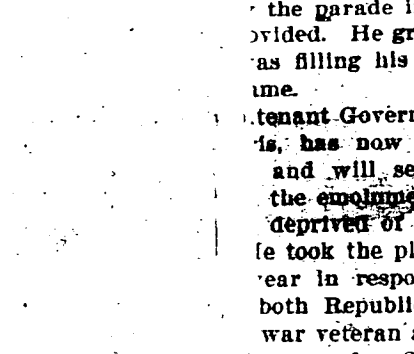

TRADE WITH SANTO DOMINGO.

United States Gets the Lion's Share of the Business. Probably no country on the globe of equal extent has so many natural elements of prosperity within its borders as has Santo Domingo, says the New York Tribune. Its agricultural, forest and mineral resources, although comparatively neglected by its people, are remarkably varied and important. The products of the soil are sugar, cocoa, coffee, tobacco, bananas and other tropical fruits. The mineral resources include gold, iron, copper, quicksilver, petroleum, rock salt and other valuable minerals and metals. The products of the forest are also extremely rich, including mahogany, satinwood, lignum vitae, lancewood, oak, pine, logwood, several species of palms and many valuable fiber-producing and medicinal plants. Fertile lands suitable for the production of almost any product of the trop-

THE OHIO GOVERNORSHIP.

Death Brings About a Far-Reaching Change.

Death has brought about a change in the Governorship of Ohio, which not alone affects individuals but parties. In the election last November John M. Pattison, former Congressman, was elected Governor over Myron T. Herrick and was the only Democrat chosen. But his victory was enough to bring large benefits to his party both in the way of appointments and the veto power by which purely Republican legislation could be thwarted. The strenuous campaign, however, was too much for Mr. Pattison. He broke down and his inauguration was a sad event. He died on the 10th of August, leaving the Governorship vacant. The office is now held by Governor Harrison, who was elected in 1904.

JOHN M. PATTISON.

Governor Harrison was born on a farm in Clermont County, Ohio, in 1847, where his home was until recently. At the age of 10 years he enlisted and served during the last days of the civil war. He taught school for a few years, then attended the Ohio Wesleyan University and he continued teaching while a student to pay his college expenses. After he was graduated, in 1869, he went west to write insurance for the same company of which he was later elected President. While

JOHN M. HARRISON.

writing insurance he studied law and was admitted to the Ohio bar in 1872. At the end of ten years' practice he was invited to enter the old insurance company—the Union Mutual Life—as Vice President and General Manager. He was elected President in 1891, and held the office at the time of his death. As a young lawyer he was put on the Hamilton County (Ohio) ticket for the State Legislature and he won, although that was a bad year for the Democratic party. In 1890 Judge Ashburn, representing the Clermont-Brown district in the State Senate, died, and Mr. Harrison was elected to fill the vacancy. His work in the Senate soon led him to Congress when Cleveland was President. By the time his term was out a Republican Legislature had re-elected Ohio and his new district had a normal Republican plurality of several thousand. He then took up his work in the insurance business. For many years he lived at Milford, Ohio, a few miles from Cincinnati. He married Miss Williams, a daughter of Prof. Williams, who held the chair of Greek in the Ohio Wesleyan University for many years. Governor Harrison leaves a wife, a son, who has just been graduated from college, and two daughters.

Really Observing. "Where you going, Hiram?" asked the old lady on the train. "Up in the observation car is on behind," her husband, with a grin. "Why, the observation car is on behind." "No, it isn't; it's up front. That's the observation car," replied the old lady.

SOMEWHERE. There's a whisper in the branches of the hawthorn tree, And a purple blossom smiling from behind the clinging vine; There's the chatter of a chipmunk, as he leaps from tree to tree, While the daisies nodding whisper: "Come out here and play with me."

There's a path, a winding ribbon, just the clover fields beyond, That goes stealing through the meadows to the distant picket pond; There's the cool, dank, grateful shadows; there's the lazy, droning bee, And I fancy them saying: "Come out here and play with me."

There's a garden where the fragrance of the fields come lifting sweet, Where the apple's velvet tenderness to pavement weary feet; There are roses, without restraint from songsters winging to the blue, And each feathered throat is singing of its song at me and you!

There's a quiet, old-fashioned garden with its pans and hollyhocks, And its blue flag, fuchsia, rose, and pansy, and daisy; And a sweet old-fashioned lady, with a blossom in her hair, Winding in and out among them, watching every one with care.

And the dear old-fashioned lady, with her crown of wavy snow, Beams a joy and hums a love song as she patters to and fro; And she's so old-fashioned, and so sweet, and so much of a life a part, For she's somehow found a dwelling here within a rugged heart.

—Milwaukee Sentinel.

The Glasshouse Pearls

DURING THE hours of yesterday morning a startling discovery was made on the premises of Vavilov & Co., the well-known diamond merchants of Regent street. See below for a full account of the discovery, which was made by the police.

The discovery was made by the police, who were called to the premises of Vavilov & Co. by a man who claimed to be a customer. The police found a large quantity of diamonds, which were valued at £10,000. The diamonds were found in a box, which was hidden in a closet. The box was found by the police, who were called to the premises of Vavilov & Co. by a man who claimed to be a customer.

RAILROADS IN ALASKA.

Soon the Days of the Explorer and the Dog Team Will Be Over.

Railway construction in Alaska is going forward with giant strides. Within a few years the great district will be covered with a network of railroads and the days of the explorer and his dog team will have passed. Congress, although every day of the last session was busy with other matters, passed some important legislation to encourage and make smooth the way of the railroads in Alaska. At present practically the only steam road in operation in Alaska is a 50-mile road at White Pass. Many others are projected, and it is for the benefit of these that Congress legislated. The most important road commercially now under construction is the Alaska Central, which has its southern terminus at Resurrection Bay and its northern terminus at the head of navigation on the Tanana river, the two points being approximately 463 miles apart. This road, when completed, will connect the Gulf of Alaska with the waters of the Yukon and the waters of the interior by an all-American route.

According to reports made to Congress, 46 miles of the railroad have now been constructed and about \$2,500,000 has already been expended by the capitalists interested. The road is intended to be the commercial highway of Alaska. It will give access to the interior at all seasons of the year and make possible immediate development of the agricultural, timber and mining resources of the territory. The possibility of prompt and efficient military control of the Yukon valley, afforded by rapid transportation for men and supplies, will be one of the benefits of the line. It will bring to tide-water the high grade coals of the Matanuska valley, suitable for naval purposes, and as a port route it will save weeks in the transportation of mails. A large part of Alaska will be brought into easy communication with Seattle and other ports of the United States at all seasons of the year, when the line is completed. Congress granted to the Alaska Central Railroad an extension of time within which to complete the final surveys and allowed six years instead of five for the completion of construction.

Another great railway under construction is that known as the Alaska Short Line, to run from Ilamna, on the west of Chuk Inlet and the head of the Alaska peninsula, across the Kuskokwim to Anvik on the Yukon. Another line proposed is the Valdez-Yukon, backed by New York capital. It is proposed to open a rich country to this route.

It is one of the ironies of fate that beautiful homes and becoming grounds can be crowded without great expense. It is an appetite which gratifies itself by its exercise; and many a modest home is arranged more artistically than the palaces of a newly rich family. It is a habit which is not easily unlearned, and it is usually good. It is by no means uncommon for a man to give a million dollars to a college. Several men have given from five to ten million dollars each to education, that the youth of the future may not lack training in the arts and sciences. A still more significant indication of the taste of the period is seen in the large sums which wealthy men are spending on their city and country houses and the collection of paintings with which they are adorned. Art is a luxury. In the days when every dollar that men earned had to be spent for food and clothing, or turned back into a business that was expanding more rapidly than the capital of its owner, there was little money left for fine architecture or sculpture or painting. Now that the fortunes have been made, their possessors are spending them with a taste and discretion that are the mark of Europe. Only the other day it was announced that an American was negotiating for the purchase of one of the choicest private collections of paintings, ivories, marbles and furniture in Paris. It had long been expected that the American would buy the collection, for they had in Paris that Americans are seeking much things and have the money to pay for them.

That our American jury system is a crude working mechanism is generally admitted, even by those who most strongly uphold its fundamental utility. A year or so ago a Secretary of the State Department, who had been in Paris that Americans are seeking much things and have the money to pay for them.
