FORREST F. DRYDEN, Secretary.

THE FIVE-CENT CIGAR.

Its Average Life Has Been Figured at Five Years.

"The average life of the nickel cigar is five years," said a prominent tobacco man, "and it is curious to note the difference which has enabled cigarette to arrive at this general average of five years of life. Many cigars of this class run through a long series of years."

"There are some brands now that have been known for more than a quarter of a century under the same name, and they are really the same cigars, made in the same way, having the same flavor and all that sort of thing. In this connection I have been impressed by the remark which we often hear about certain brands of cigars that a man had been smoking for two years, or longer, but that the cigar was getting so bad that he had concluded to quit buying it at all. It is nothing like the same cigar, he said, 'the taste has changed, and it tasted like a mixture of cabbage leaves.' Now, he was altogether wrong about that. I know the cigar, know how it is made, and all about it, and I know that no sort of change has been made in the process of manufacture. The trouble is that a man's taste changes. He may get up feeling badly, his stomach may be in bad shape, and, of course, the cigar will not taste as it did when his system was in better condition. The cigar is blamed, and he quits buying it. Instances of this sort are very common. Mind you, I do not mean to say that some of the brands do change. There are tricks in the cigar business, just as there are in other trades. But in nine cases out of ten the trouble is with the smoker. But, returning to the age of cigars, the average to which I have referred has been secured by an average made in the process of manufacturing. It is reached by taking the two extremes of the good and the bad five-cent cigar, and figuring back to the middle. Some five-cent cigars close with the first puff, and some open with the first puff, and in them to reach the middle of the public. The material out of which they are made would not make decent 'three-fors.' The higher grades of five-cent cigars are made as carefully and with as much skill as the higher grades are sold at a higher price, and I do not mind saying that many of them are really far superior in material, flavor and method of manufacture. So many of them, however, are of the cheap kind that the average is never over five years, while the average life of the higher priced cigars will run to a much higher figure."—New Orleans Times-Democrat

He Made the First Revolver. The majority of people can scarcely remember the time when there was no revolver, yet the fact is that it is a modern weapon, and its form of real efficiency is less than half a century old. It was the invention of Joseph Smith, a citizen of Lancaster County, Pennsylvania, a county which also boasts of Robert Fulton, who is not the inventor of the steamboat, was certainly the man that introduced the art of steam navigation successfully and is largely to be credited with the wonderful results which have followed and its revolutionary effects on commerce and civilization.

Before the civil war there were the old-fashioned paper-bowls, which were dangerous to the user, then came the "davy," which had to be loaded like a musket, each barrel requiring separate attention, and usually being in effective except at point-blank range. Then followed the present weapon of destruction, which is much more effective than the musket of our fathers. Out of the revolver was evolved the repeating rifle of today, which has so far changed the whole tactics and strategy of war that Jean De Bloch felt that a war could never again take place. Had he lived to see the end of the war in South Africa he would have been confirmed in his views.

What "Sub Rosa" Means. The rose is the symbol of secrecy in Greece and was formerly hung over the table where guests were entertained in a house that nothing bad there was to be reported. Hence "sub rosa" (under the rose).

What has become of the old-fashioned woman who inquired of her suitor boy, "Has the cat got your tongue?"

DESERT ANIMALS.

Sandy Wastes Where Reptiles and Quadrupeds Thrive.

There are cold deserts and hot deserts, but it is in the latter that the prevalence and continuance of animal life are the more remarkable. There are almost no places, however hot the sun or waterless the sand, where some life does not exist, often of an unexpected kind. The African desert is a commission found that a horrible sandy desert which had to be crossed to reach the boundary swarmed with large snakes, and the waterless plains of Arizona abound in reptiles and insects, says the London Spectator.

Probably the best-known desert in the world is the Great Sahara, because the oases in its center are occupied by intensely hostile and warlike tribes, whose hatred of the French is a kind of delirium. But on its northern fringe two animals are found which seem specially adapted for life in this forbidden land. They are the addax antelope and the gazelle. The addax is an ugly, awkward-looking animal, with spiral horns, and very wide spread hoofs which enable it to go at a great pace over the sand. The gazelle is a more graceful animal, and is a species of antelope known to the ancients. It was not rediscovered till 1822, when it was found by a French explorer near Dougla. As it is rather a large antelope, it requires a considerable amount of food, and the difficulty which suggested itself was to discover where it found its food.

It is now fairly certain that the addax follows the rains which fall at certain seasons, and probably travels vast distances in the wake of the seasonal storms. The immense area of desert in northern Africa makes this possible, though without special knowledge of the meteorology of that part of the world there is always rain going on in some part of the desert fringe. How the addax supports itself in these absolutely dry districts is not known. Gazelles are mainly desert animals, but Loder's gazelle seems to have rather more than the family leaning toward the fringes of civilization, and it was not till a special expedition was organized that the antelope was found. How was obtained it. When at last it was found it was in a place not absolutely waterless; for there was a well, the sides of which were made of woven half-grass, somewhere in the neighborhood of the antelope. It was quite inaccessible to the gazelle, and the antelope all round was full of rolling wind-driven sand.

Rifle for British Cavalry. The British cavalry soldier is to carry a rifle in place of a carbine. The butt of the rifle will rest in a leather socket fastened to the saddle, just behind the trooper, and will stand upright, the muzzle being attached to the left shoulder by a sling.

Dromedary Race in Algeria. A dromedary race between Biskra and Tagueta, Algeria, is being organized. The distance to be covered is 140 miles.

The Emperor in History. The Israelites respected the emperor as a stone of ecclesiastical harmonies, and we all know the passage in the revelation of "a rainbow round about the throne, in sight like unto an emerald," and how the fourth foundation of the temple was the heavenly Jerusalem, an emerald. In Ezekiel it is said, "Syria was thy merchant by reason of the multitude of the wares of thy making; they occurred in thy fairs with emeralds, purple and embroidered work, and linen and coral and agates," and the high priest wore an emerald ring on the right finger of his right hand, all the same as did the Mexican pontiff serving in the temple of Votan, with whom and his Israelite brother were strange points of resemblance.

Past Warship for France. At St. Nazaire the French armored cruiser Admiral Aube was launched recently. She is to steam twenty-three knots, carry a crew of 625 men, and will be armed with forty guns and four torpedo tubes.

We have noticed that no one is so eloquent over the attention we owe the grave of the dead as the man who has a monument of flowers to sell.

BASIL'S VINDICATION

He pressed the fragrant note to his lips, and with a serene smile leaned back in his chair. It was more, much more, than he had ever dared to hope.

Only a few words, written in a delicate feminine hand on a sheet of tinted paper, yet Basil Vere, having read, thought himself the happiest man alive.

"Meet me in St. Saviour's Church at noon to-morrow."

The messenger who had brought the epistle having gone, Basil gave himself up to an hour's sweet contemplation of his love.

Marie Somerville was the only daughter of a wealthy, but proud, lawyer, who had made up his mind that no one in the three kingdoms was too good for Marie.

Marie, however, inheriting more of her mother's gracious sweetness of character than of her father's stern and harsh demeanor, thought otherwise, and would have none of the many suitors that the latter provided for her choice.

Then one day she met Basil Vere, a young subaltern in an infantry regiment, who from the very first time of meeting had determined to woo and win the pretty, blue-eyed daughter of the lawyer.

Opportunities for seeing each other were not frequent, however, and many were the subterfuges to which resort had to be made in order that they might enjoy each other's society.

But to-morrow! Then Basil would pour out his whole heart to his love, quite undisturbed.

It was almost too good to be true, and he threw his cap high in the air.

Half an hour before noon Basil sat patiently in a secluded seat, hidden behind one of the massive pillars of the church, waiting for Marie.

At every step he raised his head and watched those who entered.

Noon came, and the great clock overhead chimed out the hour.

"She will be here in a moment," he said to himself, hoping that the next worshipper would appear in the person of his love, but all in vain.

The suspense seemed long, and the quarter chimed; still, the subaltern waited.

Clasping her hands, she stood before him. "Remember," she whispered, "he is my brother."

"Go now, Basil," she whispered. He needed no second bidding. He dared not stay in the company of Francis longer, else he knew that he must retaliate upon him his ill words and blows.

Oh, that Marie had not asked him to do the all but impossible.

And as Basil Vere walked homeward his brow was clouded and his step heavy.

Not a week had passed.

Basil Vere sat musing in his boat on the Thames below Oxford. He had been boating alone, and had drawn his boat in among the rushes by the river bank.

Thus, quite out of sight, he could watch the other parties that passed and re-passed.

Suddenly he heard voices.

"The call!" he would almost have said. "Yes, the fellow actually had the cool cheek to meet Marie in St. Saviour's Church," said a voice that Basil recognized as belonging to Francis Somerville.

"Great Scott!"

"Luckily I came upon them in time or I don't know what might not have happened."

"But what does Marie say about it?" asked one.

"She is quite nasty. Will not have a word to say to me now! Says I've killed her with my interference, and mopes all day long."

"And the old boy means to have her marry well?"

"He is less than a title will suit him. Besides—"

IN THE CATTLE COUNTRY.

Ranges Once Rich Are Now Completely Deserted.

For ten years, more or less, say from 1874 to 1884, and later than this in the northern range, there was universal prosperity and lots of money to be made by the cowman and the stock-raiser. The boundaries of which were set by precedent and by the honor of custom—as far as a man on horseback could see, and by water—as firmly as the boundaries of the land.

There was no rent and virtually no taxes to pay. A man might own a hundred thousand cattle and not an acre of land, though he claimed "range rights" to fifty thousand acres, and enforced those rights with blood and iron, says a writer in the Century Magazine.

Apparently this was a new sort of free life in which man had risen above the old slow rules of thrift. It was a stupendous business, turning the cattle into grass, and when money was needed, round them up and sell them.

But the lucky dog sometimes has difficulty in enjoying his bone in peace. Lured by the stories of sudden riches in the cattle country, other men, as bold and hardy as the first, flocked in from all parts of the world, and began raising big and little herds.

The building of the railroads across the country stimulated immigration, the great Texas boom moved the completion of the Texas Pacific railroad in 1883. At first the early comers welcomed the new ranchers, sold them cattle at exorbitant prices, chuckled at their ignorance, allowed them to come in on the ranges, and grew richer and richer. There were times when Texas steers, big and little, brought \$25 each on the range. But the tide swelled, and the cattle continued to increase.

Many good men lay down in the hot sand, never to rise again. But that, bad as it was, did not tell the whole story of destruction. If cattle had been killed instead of men, the trouble would have been averted, but the herds went on multiplying until they covered all the range, giving it no rest in winter or summer. Each cowman scrambled for all he could get, he argued that if he did not take the range he would lose it.

Next morning all three were struggling in the water.

It did not take long for Basil to swim to the bank. The second occupant of the boat was seen by his side in a half-drowned condition, yelling vengeance on Basil. But where was Francis?

They could not see him for the moment.

A minute had not passed, however, before his head appeared above the water. He threw his hands up with a supplicating gesture and then disappeared.

"Good heavens, the yell!" cried Basil. "Nothing can save him once he gets caught in that current."

"Look here, Francis, if you don't leave off talking such rubbish you and I will quarrel."

"We mustn't do that, Basil, must we?"

Of course not," cried Marie, entering at that moment.

PAPERS BY THE PEOPLE

COAL MINERS ARE UNDERPAID.

By Rev. Rufus A. White, of Chicago.

The demand for better wages is just, and the coal miners in the anthracite region are not only hard, but it is unusually dangerous. The bureau of mine inspection reports 4,570 men and boys killed in the last ten years. In 1901 457 were killed and 1,238 injured. For every 119,000 tons of coal mined in the anthracite coal fields one man or boy is killed.

What are the miners paid for this kind of work? On an average about \$300 per year—the poorest paid labor, it is said, in the Northern States. It has been figured that at \$50 a month a family of five would have, after rent, medical bills and clothing, not more than \$14 a month for food—less than 50 cents a day and not quite 10 cents a day for each person. How much more at present prices will 10 cents a day buy?

My sympathy is with the miners because before the strike was called President Mitchell agreed to submit the matter in dispute to an arbitration board. The reply of the operators was to the point of insult. There is nothing to arbitrate. Mr. Mitchell would not inform the public as well as the miners that "The rights and interests of the laboring men could be protected and cared for, not by labor agitators, but by the Christian men to whom God has given the wisdom, and given the control of the property interests of the country."

President Barlow has a leaf from the medieval ages, and says to the free Americans of the twentieth century. He says like some corrupt baron of a medieval castle, "I am the Lord as a partner in the railroad and coal monopolies of Pennsylvania is a blasphemy which should not be unheeded."

UBERCULOSIS IS CURABLE.

By Dr. H. M. Biggs, New York's Health Officer.

Tuberculosis is infectious and communicable, but a tuberculous patient may live in the same room, for days or years, with a healthy person without danger to the latter, if proper precautions are taken. The germ of the disease is not in the sputum, but in the respiratory tract. In advanced cases as many as three thousand millions are thrown out in a single cough. They are inhaled as dust and lodge in the lungs.

It is not only preventable, but curable. It is the most insidious of all diseases, and a specialist may detect no indication of its presence until it is too late to cure. It is not only preventable, but curable. It is the most insidious of all diseases, and a specialist may detect no indication of its presence until it is too late to cure.

DEGENERACY OF NEW YORK'S FOUR HUNDRED.

By Henry Watterson, Editor Louisville Courier-Journal.

The term "smart set" was adopted by society to save itself from a more odious description. The distinguishing trait of the "smart set" is a certain amount of money. It makes a business of displaying and overlapping conventional restraints upon its pleasures and amusements. It is a class of people who are not only rich, but who are also smart.

It is not only preventable, but curable. It is the most insidious of all diseases, and a specialist may detect no indication of its presence until it is too late to cure.

AN ODD COLLECTION.

Why a Book Lover Buys Old Bibles and Hymn Books.

"All book collectors have their weak points," remarked a man who is often seen poring over the sidewalk counters of second-hand book shops, "and mine is the 'old' book. I am a collector of old Bibles and hymn books. Not particularly because they are old, but because they are old Bibles and hymn books."

My first purchase of the kind was an Episcopal prayer book, battered and torn, with the name of an old friend of mine in gilt on the cover. It gave me a shock to find it on a second-hand counter, and I paid the required price and carried it home. The man in dead clothes, who was living in the street, well to do, I have no idea how his prayer book became public property.

People are queer. I offered it to a remote relative of the former owner, but she said she didn't care about it. Since then I have bought in other old Bibles and hymn books which, I am sure, contain interesting written matter. It is pitiful to see a Bible in a shop, to see a dear old Henry, from his devoted mother, or "Elizabeth, from a loving father," or "Little Willie, from his mother," and to see it in a shop, to see a dear old Henry, from his devoted mother, or "Elizabeth, from a loving father," or "Little Willie, from his mother," and to see it in a shop.

Well Watered. Stubborn you complain about these streets being damp. Why, I know a city where the streets are always a city of water.

THE FUTURE OF THE FUTURE

By Mrs. G. A. Allen, of New York.

FISH AND GAME SEASONS.

WHEN IT IS LAWFUL TO KILL.

Penalties For Violation.—In Case of Non-Payment of Fine and Costs the Convicted Are Subject to Imprisonment.

The State Board of Fish and Game Commissioners has issued for distribution copies of the fish and game laws compiled to date. These are accurate and reliable, showing the open and close seasons for all kinds of game and fish, together with some hints for the guidance of sportsmen.

Under the caption, "It is always unlawful," the board says: "To take or attempt to take any game except by the use of guns held at arm's length. Fine, \$50."

"To have trapped game in possession. Fine, \$50."

"To take or attempt to take any fish in any waters excepting with hook and line, excepting taking minnows for bait with a net or more than thirty feet long, excepting to pounce and take when there is tracking snow on the ground. Fine \$20."

"To hunt on Sunday or carry firearms in the solt or woods or on the waters on Sunday, or to hunt for quail, partridge, pheasant, woodcock or rabbit when there is tracking snow on the ground. Fine \$20."

"To draw off water to take fish. Fine, \$100."

"To use set lines in waters inhabited by pickerel, pike, perch, bass, trout or to use any contrivance in fishing having more than three hooks or one of four hooks. Fine, \$20."

"To permit the erection or maintenance of artificial contrivances for taking game and fish; apply to owners and tenants of lands. Fine, \$20."

"To use camp for bait or in any other way to lure fish to fresh water. Fine, \$20."

"To capture, kill, injure or to have in possession live or dead game or certain birds, fish or other animals. Fine, \$20."

"To hunt geese, ducks or any web-footed wild fowl, except between one hour before sunrise and one hour after sunset. Fine, \$20."

"To hunt or keep trap more than six inches in length, or more than six inches in width, or more than six inches in height, or more than six inches in diameter, or more than six inches in circumference, or more than six inches in any other dimension. Fine, \$20."

"To hunt or keep trap more than six inches in length, or more than six inches in width, or more than six inches in height, or more than six inches in diameter, or more than six inches in circumference, or more than six inches in any other dimension. Fine, \$20."

"To hunt or keep trap more than six inches in length, or more than six inches in width, or more than six inches in height, or more than six inches in diameter, or more than six inches in circumference, or more than six inches in any other dimension. Fine, \$20."

"To hunt or keep trap more than six inches in length, or more than six inches in width, or more than six inches in height, or more than six inches in diameter, or more than six inches in circumference, or more than six inches in any other dimension. Fine, \$20."

Will Make Affidavit

New Lease of Life for an Iowa Postmaster.

Postmaster R. H. Randall, Dunlap, Ia., says: "I suffered from indigestion and resulting evils for years. Finally I tried Kodol. I soon knew I had found what I had long looked for. I am better today than in years. Kodol gave me a new lease of life. Anyone can have my affidavit to the truth of this statement."

Kodol digests your food. This enables the system to assimilate supplies, strengthening every organ and restoring health.

Kodol Makes You Strong. Prepared only by E. G. Sawyer & Co., Chicago. Sold in bottles of 25 and 50 cts. For sale by Morse & Co., May's Landing, N. J.
