The Cheapest

AND
The Best!

Life Insurance at Actual Cost

THE NATIONAL LIFE INSURANCE COMPANY OF CHICAGO, invites the attention of those contemplating insuring their lives to its Mutual or Reciprocal

PLAN, which enables even the poorest man to provide for his family in case of death, without depriving them of the necessities of life, as do many who endeavor to pay the high premiums of old life companies, who charge for Assured Death Losses when NEITHER OCCUR, and then add a heavy loading for extravagant expenses. On this plan you only pay for the death losses actually experienced, and as they occur, with a small fixed sum for expenses. Call on the agent for circular fully explaining this system.

The Practical Results!

Since its organization in 1870, the NATIONAL has paid in death losses \$57,760, at a cost to the deceased of \$791,90 in premiums. Old Life Companies would have paid for the same premiums \$21,221, showing a gain by insuring in the NATIONAL of over \$36,500.

The Capital and Securities of this Company are sufficient to comply with the Insurance Laws of any State in the Union.

BANK, LOUAND, Pres. H. J. TEND, Sec'y

SUPPOSE.

Suppose my little lady
Your doll should break her head.
Could you make it well by crying
Till your eyes and nose are red?
And wouldn't it be pleasanter
To treat it as a joke?
And say you're glad 'twas Dolly's
And not your head that broke?

Suppose you're dressed for walking,
And the rain came pouring down,
Will it clear off any sooner
Because you scold and frown?
Bea, so you scold and frown?
And wouldn't it be nicer
For you to smile than pout,
For you to smile in the house
And so make sunshine in the house
When there is none without?

Suppose your task, my little man,
Is very hard to get,
Will it make it any easier
For you to sit and fret?
And wouldn't it be wiser
Than waiting like a dunce.
To go to work in earnest
And learn the thing at once?

Suppose that some boys have a horse
And some a coach a pair,
Will it tire you less while walking
To say "It isn't fair?"
And wouldn't it be nobler
To keep your temper sweet
And in your heart be thankful
You can walk upon your feet?

Suppose the world don't please you,
Nor the way some people do.
Do you think the whole creation
Isn't altered just for you?
And isn't it my job or gift,
The wisest, bravest plan;
Whether comes or doesn't come,
To do the best you can?

Prof. Taylor's Report.

We give this week the conclusion of Prof. Taylor's Report on the Cranberry Disease:

I visited Pemberton, Burlington Co., in company with Senator Gaskill and Messrs. Theodore Budd, Joshua Forsyth, Japhet Alston, David D. Coles, Ives Davis, and others, all engaged in cranberry growing. We visited the principal plantations within several miles of Pemberton, and found that the draught had disastrously affected this region. Pines were on fire in many places and burning with great fury, owing to their extreme dryness. The streams had dried up, with few exceptions, and no water was found within five feet of the surface on the cranberry lands. There is very little heavy bog land in this district; it is nearly all savanna, (black sand,) composed of pure, sharp, white sand, combined with about 3 per cent. of black, vegetable matter. Sometimes cranberry cultivators at this place cover the runners with pure white sand. In times of great and high temperature, it protects, in a measure, the roots of the vines from the scorching rays of the sun. On the occasion of my visit I found the white sand on the vines so hot that it was disagreeable to hold in the hand, but the black sand near the same place was still hotter, and the cranberries on the vines were literally baked. Previous to visiting this district I had not admitted that rot of the berry was ever produced by a scorching sun, but I now have sufficient evidence of that fact.

On the 9th of September I visited the plantations of Charles C. Hinchman, situated at Taunton, Burlington County. They are subdivided into several plots, which are peculiarly and favorably situated for cranberry culture. A stream of pure cold water flows through all his plots most of which are nearly surrounded by high banks. From these ooze unseen currents of water, which moisten the cranberry plots below them. The stream which flows through Mr. Hinchman's principal bog is about three feet deep and twelve feet wide, and is slightly tinged with soluble humus (poaty matter) and bicarbonate of iron. In several of the bogs belonging to this gentleman there are sulphur springs, one of which flows in the middle of a cranberry plot without doing any apparent injury to the plants. It may be remarked that Mr. Hinchman's cranberry vines, although cultivated, are growing in water as if in a wild bog. The condition of his bog land vines and berries at once demonstrates that the cranberry-vine may be brought to a high state of cultivation, although the roots may be submerged in water the year round. Many valuable experiments have been made by Mr. Hinchman to ascertain how much drainage may be profitably employed, and the description of sand, as well as the amount per acre, that should be used on bog-land previous to the planting of vines; also, how much should be

laid over the vines when in full growth.

I think that the Taunton plantations would be very little improved by the use of lime, while on the dryest portions of them a much larger yield of fruit would be obtained by the free use of fertilizers applied after the removal of the water of the winter flooding. On the margin of these plantations Mr. Hinchman has erected an extensive building of stone for the assorting, cooling, and storage of berries. Cylinders are supplied with an ice-mixture, through which cooled air is carried by means of suitable machinery over and through the crates of berries awaiting transportation.

This the only place in the United States where machinery is employed to cleanse, cool, and assort the berries previous to shipment. This important fact was established by my visit to Mr. Hinchman's.

That the cranberry-vines are not injured by being affected, even though the roots may be submerged from 1 to 2 inches, provided the water is cool and in motion. Mr. Hinchman's plantations possess greater natural advantages than those of Mr. Bishop, but he will, notwithstanding, have a smaller crop than that gentleman, and his berries will ripen later. While walking over the Taunton vines my feet were frequently in two inches of water, and the use of rubber boots was indispensable, while the surface of the plantations at Manahawkin was comparatively dry. Under the wet system the vines have a greater tendency to extend in woody growth. The blossoms are consequently later in forming and the berries later in maturing than under the dryer system of culture; but in a series of years the wet system might prove more profitable than the other, since it affords a better protection against grasshoppers, and also the berry and vine worm. These pests are unknown on Mr. Hinchman's bogs. An analysis of the berries cultivated under each system would probably show that those from the wet plantations contain less earthy and solid matter generally than those from the dry, and, all other conditions being equal, would probably keep better than the former. A recent analysis of Captain Small's Cape Cod Early Black Bell berries gave one-fifth of 1 per cent. of earthy matter, while the common Cape Cod Bell berries of good quality give about one-fourth of 1 per cent. All other conditions being equal, the Early Black would prove the better keeper, while the common bell of Cape Cod Bell would prove the better for immediate use, being more juicy.

The system of sanding cranberry land is greatly varied. On Cape Cod the cultivators take advantage of their extremely cold winters. When their bogs are covered with ice of sufficient thickness to bear a horse and wagon, sand is carted over it and spread to the thickness required. When the ice melts, the sand is deposited evenly over the vines, at a cost of ten to fifteen dollars per acre, for one inch in thickness. In Southern New Jersey this system of sanding can seldom be taken advantage of, owing to the mildness of its winters. Mr. Theodore Budd, of Pemberton, New Jersey, informed me that in his neighborhood a layer of sand one inch thick can be spread over an acre of vines at a cost of \$20, provided labor does not exceed \$1.50 per day of ten hours, and when the sand is procured on the edge of the bog to be covered. On large plantations, consisting of one to three hundred acres, a layer of sand one inch thick will cost from \$40 to \$60 per acre. The cost will, of course, vary according to the distance of transportation.

The cranberry growers of New Jersey are very much divided in opinion as to the amount of water that should flow in the ditches of their bogs when the berries are coloring under high atmospheric temperature. Some believe that excessive moisture and high temperature cause the berries to rot, while others equally intelligent affirm the opposite. Much of this uncertainty arises from the limited quantity of water furnished at the fountain head of many of the bogs under cultivation. A small stream will quickly fill the ditches of a ten acre lot when stops or gates are used; but, during high temperatures, the water becomes quickly heated, and instead of proving beneficial, will prove hurtful to the vines, especially when the

sub-soil has not been well decomposed. Undersuch conditions fermentation will be promoted, producing organic acids and sulphuretted hydrogen in the vicinity of the roots, while a much larger flow of water in the ditches would cool the substratum of the bogs, and remove, at the same time, all soluble noxious substances.

At the Taunton plantation Mr. Hinchman introduced a novel system of washing sand over his bog-land by means of a stream of water conveyed for that purpose along the base of the high sand-bluffs which nearly surround his plots of cranberry vines. I am informed by Mr. Hinchman that by the use of this system sand was washed over his lands at the rate of ten tons per minute. In this way a kind of sand charged with ochreous clay (which is at present deemed worthless for cranberry-culture) may be used, as the water floats and separates the clay from the sand, depositing the latter on the vine, while the clay is washed away in the main stream, which was highly colored in consequence at a distance of ten miles below the point of operation.

Before investing in cranberry-culture more attention should be paid to the condition of the soil than has heretofore been done, for on that depends the quantity of water necessarily required for the purposes of irrigation. When water is very limited in supply, it should be protected from the sun's rays in some practical way. Small ponds or ditches used as reservoirs might be protected by shade trees, and in many cases streams might be easily protected in this way. On my last visit to Bricksburg, September 12, in company with Dr. Merriman of that place, we visited one of his plantations for the purpose of testing the difference of temperature of the waters at different parts of the bog. The stream which supplied several acres with water was so small that it might have been all conveyed at the time of our visit through a 10-inch pipe. It entered the bog from a ditch four feet in depth. A thermometer when immersed in it indicated 72° Fahr. The water being somewhat protected from the sun's rays, the temperature at the exposed edge of the ditch at the same point was 90° Fahr. At a distance of a hundred yards farther on, where the water was fully exposed to the sun's rays, the temperature indicated 89° Fahr. Shaded water in a ditch a hundred yards still farther removed from the first ditch had the temperature of 78° Fahr., while the sand on the exposed edge of the ditch showed a temperature of 92° Fahr. These observations were taken at 4.30 p. m.

There is another political muddle in Arkansas, and the Federal government has again been called upon to interfere in the affairs of that State. V. V. Smith who was Lieutenant-Governor of Baxter, has issued a proclamation setting forth that he was elected Lieutenant-Governor in 1872, for a term of four years and that his time being expired, and Baxter having abdicated the Governorship, he has become governor of Arkansas. Smith has also sent an address to the President asserting that the new constitution of Arkansas and the elections held under it are null and void, the change in the constitution having been made without regard to the provisions of the organic law; and he asks the President to guarantee to said state of Arkansas a Republican form of government; and protect the same against domestic violence. Smith's proclamation and address were received by the President on the 15th inst., and referred to the Attorney-General for his opinion. As soon as Smith's motion was known in Little Rock, Governor Garland procured warrants for the arrest of Smith, his Secretary of State, Wheeler, and John G. Price, manager of the Republican newspaper, in which the proclamation was published, the charge against them being conspiracy to usurp certain offices. Price was arrested and was held in \$5,000 bail, but the others could not be found, and a reward is now offered for their apprehension. It is rumored that Smith is hiding in the U. S. arsenal at Little Rock. Neither the Governor nor the Legislature now in session at Little Rock, it is said, will appeal to the President or to Congress, the State authorities being able to protect themselves. --Public Ledger.

A MEDICAL TRIUMPH!
Dr. D. S. PERRY'S
Vegetable Aromatic
Bitters.

These Bitters must become the universal remedy of the age. There is nothing like them or equal to them under the sun. They restore the weak, invigorate the feeble, and give new life and tone to the broken down system. In miasmatic and malarious districts they are worth a ship load of quinine powders and pills. They are especially adapted to persons suffering from

Dyspepsia, Liver Complaints, Costiveness, Headache, Neuralgia, Rheumatism, Chills, Fever and Piles.

TO DELICATE FEMALES.
Ladies, old or young, will find these bitters especially adapted to diseases peculiar to their sex. Nervousness, Lassitude, Want of Appetite, and General Debility, all yield to the magic charm of these inestimable Bitters.

HEAR WHAT IS SAID.
HEAR WHAT IS SAID.
HEAR WHAT IS SAID

"Wonderful effects have resulted from your Dr. Perry's Bitters."
"My chills are gone. I can hardly believe it."
"Send me one case Perry's Bitters again. Nothing like them here."
"I enclose affidavit of my case. I had to do so to convince you of the wonderful cure."
"Surely they are the most delightful wise tonic in the world."
"Dr. Wilson says that you are a public benefactor."
"Hurrah! No more rheumatism."
"No more headaches, thanks to you."

We could fill this paper twice over with just such genuine extracts, but the above must suffice. Our Bitters are prepared under the supervision of Dr. D. S. Perry, Member of the Royal College of Physicians and Surgeons, London, England, and of the Medical Clinic of Glasgow. All orders should be addressed to the

Perry Aromatic Bitter Co.,
NEW YORK, U. S.

These Bitters are sold either by the bottle or case at \$1 a Bottle.

Parties in sending letters for advice as to their diseases, will confer quite a favor by giving name of County as well as Town where they reside. It will save us a wonderful amount of time and annoyance if this will be observed.

KEARNEY'S

FLUID EXTRACT
BUCHU

IS THE ONLY KNOWN REMEDY FOR

BRIGHT'S DISEASE,
and a positive remedy for
GOUT, GRAVEL, STROPTURES, DIAPHRAGM, DYSPEPSIA, NERVOUS DEBILITY, DROPSY, FEMALE COMPLAINTS,

Non-Retention or Incontinence of Urine, Irritation, Inflammation or Ulceration of the Bladder and Kidneys.

Spermatorrhoea, Leucorrhoea or Whites, Irregular or Painful Menstrues, Bearing Down, Chlorosis, Sterility and
All Complaints incident to Females.

KEARNEY'S EXT. BUCHU
For Stone in the Bladder, Calculus Gravel or Brickdust Deposit and Mucus or Milky Discharges, and Diseases of the Prostate Gland.

Kearney's Ext. Buchu
Cures diseases arising from Imprudences, Abuse of Disipation, etc., in all their stages, at little expense, little or no change in diet, no inconvenience and no exposure. It causes a frequent desire, and gives strength to urinate, thereby removing obstructions, preventing and curing Strictures of Urethra, allaying Pain and Inflammation, and expelling all poisonous matter.

Used by persons in the decline or change of life; after confinement or labor pains, bed wetting in children, etc.

Prof. Steele says: "One bottle of Kearney's Ext. Buchu is worth more than all other Buchus combined."

KEARNEY'S EXT. BUCHU
Permanently cures all affections of the Bladder, Kidneys and Prostatic Glands existing in Men, Women and Children, no matter what the age.

Ask for Kearney's. Take no other.
Price One Dollar per bottle or Six Bottles for Five Dollars.
Depot, 104 Duane Street, New York.

STRAWBRIDGE & CLOTHIER,
N. W. corner Eighth and Market Streets.
PHILADELPHIA.

A GREAT STRIDE
OVER OLD BUSINESS CUSTOMS.

OAK HALL,
The Largest Clothing House in America,
Starts on a New Career!!!

BUSINESS MEN thoughtfully bent on upright dealing, have long been thinking over, working out and experimenting on various propositions, and here and there an establishment which has accepted one or another of them, and ordered their business accordingly: One "Cash," another "One Price," &c., &c., but

WE UNHESITATINGLY ADOPT THEM ALL,
and confidently rely on the approval and support of an intelligent public, we inaugurate what we believe to be the best system in the world, and

WE NOW ANNOUNCE THESE
AS OUR
FOUR CARDINAL POINTS:

1st Point, CASH.
Under the Cash Payment System, one pays only for what he gets, and gets "bates nothing to a hanging fund," to provide for losses on bad debts.

2d Point, ONE PRICE.
Not the "First Price," but the "Lowest and Lowest Price." The Price marked in Plain Figures on every garment, and no deviation allowed.

3d Point, Full Guarantee.
A Printed Guarantee, bearing the signature of our firm, accompanying each garment.

GUARANTEE.
We hereby guarantee:
1. That the price of our goods shall be as low as the same quality of material and manufacture as sold anywhere in the United States.
2. That the prices are precisely the same to everybody for same quality, on same day of purchase.
3. That the quality of goods is guaranteed on price of goods.
4. That the full amount of cash will be refunded, if customers find the articles unsatisfactory, or if return them unused and unaltered within 10 days of date of purchase.

[Signed] **WANAMAKER & BROWN,**
OAK HALL,
Ninth and Market Streets, Phila.

4th Point, Cash Returned.
This is simply a concession on our part to our customers to secure them full confidence in dealing with goods of this kind. We have no other policy, and we have no other system, and we have no other method of doing business. We have no other policy, and we have no other system, and we have no other method of doing business. We have no other policy, and we have no other system, and we have no other method of doing business.

ENTIRE CHANGE OF BASE.
We now swing clear of all combinations or systems, and burn the bridges behind us. With all departments reconstructed, we begin business.

Saturday, October 3d, 1874,
For the Full Trade, and anticipate that
Marvelous and Unprecedented Increase of Business for which we are well prepared.

WANAMAKER & BROWN,
S. E. Cor. Sixth & Market Streets,
PHILADELPHIA.
